## INTERNATIONAL SPACE STATION ASSEMBLY SEQUENCE (Revision E, June 1999)

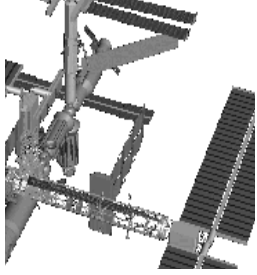

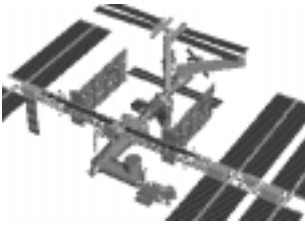

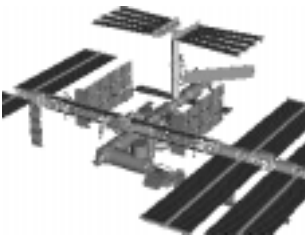

Date	Flight	Launch Vehicle	Configuration	Element(s)	Rationale
Nov 1998	1A/R	Russian Proton Rocket	<p><b><u>COMPLETED</u></b></p> 	<ul style="list-style-type: none"> <li>• Zarya control module (Functional Cargo Block-FGB)</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Launched from the Baikonur Cosmodrome, Kazakstan, on Nov. 20, 1998.</b></li> <li>• It provides propulsive control capability and power through the early assembly stages.</li> <li>• It provides fuel storage capability.</li> <li>• It provides a rendezvous and docking capability to the Service Module.</li> </ul>
Dec 1998	2A	US Space Shuttle (STS-88) <i>Endeavour</i>	<p><b><u>COMPLETED</u></b></p> 	<ul style="list-style-type: none"> <li>• Unity connecting module (Node 1)</li> <li>• 2 Pressurized Mating Adapters attached to Unity</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Unity was launched aboard the Shuttle Endeavour on Dec. 4, 1998, and attached on Dec. 6, 1998 to the orbiting Zarya module.</b></li> <li>• PMA-1 connects Unity and Zarya. PMA-2 provides a Shuttle docking location.</li> <li>• Eventually, Unity's six ports will provide connecting points for the Z1 truss exterior framework; U.S. lab; airlock; cupola; Node 3; and the MPLM as well as Zarya.</li> </ul>
May 1999	2A.1	US Space Shuttle (STS-96) <i>Discovery</i>	<p><b><u>COMPLETED</u></b></p> 	<ul style="list-style-type: none"> <li>• Spacehab Double Cargo Module</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Shuttle mission STS-96, assembly flight 2A.1, was flown aboard Discovery May 27-June 6, 1999, carrying almost two tons of supplies to the station.</b></li> <li>• Carries external Russian cargo crane to be mounted to exterior of Russian station segment and used to perform spacewalking maintenance activities.</li> </ul>
Nov 1999	1R	Russian Proton Rocket		<ul style="list-style-type: none"> <li>• Zvezda Service Module</li> </ul>	<ul style="list-style-type: none"> <li>• The Zvezda Module (technically called the Service Module) is the primary Russian station contribution and an early station living quarters. It provides life support system functions to all early elements.</li> <li>• Primary docking port for Progress-type cargo resupply vehicles.</li> <li>• Provides propulsive attitude control and reboost capability for early station.</li> </ul>
Dec 1999	2A.2	US Space Shuttle (STS-101) <i>Atlantis</i>		<ul style="list-style-type: none"> <li>• Spacehab Double Cargo Module</li> </ul>	<ul style="list-style-type: none"> <li>• Carries logistics and supply cargo for station outfitting.</li> <li>• Carries Russian Strela crane telescopic boom to be attached to station's exterior.</li> <li>• Performs orbital checkout and setup of Zvezda module.</li> </ul>
Feb 2000	3A	US Space Shuttle (STS-92) <i>Discovery</i>		<ul style="list-style-type: none"> <li>• Integrated Truss Structure (ITS) Z1</li> <li>• PMA-3</li> <li>• Ku-band communications system</li> <li>• Control Moment Gyros (CMGs)</li> </ul>	<ul style="list-style-type: none"> <li>• ITS Z1 is an early exterior framework to allow first U.S. solar arrays on flight 4A to be temporarily installed on Unity for early power.</li> <li>• Ku-band communication system supports early science capability and U.S. television on 5A.1.</li> <li>• CMGs provide non-propulsive (electrically powered) attitude control when activated on 5A.</li> <li>• PMA-3 provides Shuttle docking port for solar array installation on 4A, Lab installation on 5A.</li> </ul>

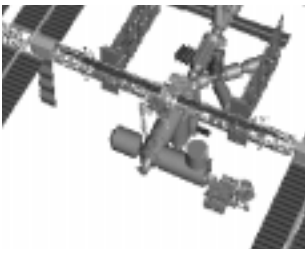

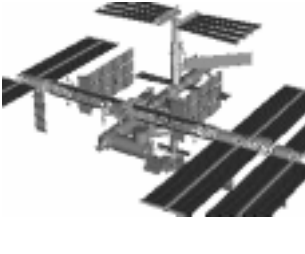

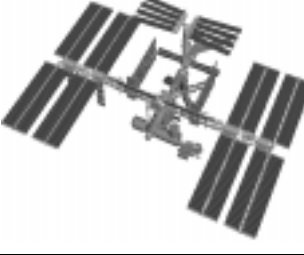

Date	Flight	Launch Vehicle	Configuration	Element(s)	Rationale
Mar 2000	2R	Russian Soyuz Rocket First Crew Launch: Expedition 1 crew up		<ul style="list-style-type: none"> <li>Soyuz</li> </ul>	<ul style="list-style-type: none"> <li>Establishes first station manning with three-person resident crew (designated Expedition 1 crew): Commnader Bill Shepherd; Soyuz Commander Yuri Gidzenko; Flight Engineer Sergei Krikalev.</li> <li>Provides Russian assured crew return capability without the Space Shuttle present.</li> <li>Station begins permanent human presence.</li> </ul>
Mar 2000	4A	US Space Shuttle (STS-97) <i>Endeavour</i>		<ul style="list-style-type: none"> <li>Integrated Truss Structure P6</li> <li>Photovoltaic Module</li> <li>Radiators</li> </ul>	<ul style="list-style-type: none"> <li>Provides first US solar power with solar arrays and batteries, called photovoltaic (PV) module.</li> <li>First PV module installed temporarily on Z1 truss until after flight 13A when it can be moved to the P5 truss segment.</li> <li>Two radiators provide early cooling, called photovoltaic (PV) Thermal Control System (TCS) radiators. Also, S-band communications system is activated for voice and telemetry.</li> </ul>
Apr 2000	5A	US Space Shuttle (STS-98) <i>Atlantis</i>		<ul style="list-style-type: none"> <li>U.S. Destiny Laboratory Module</li> </ul>	<ul style="list-style-type: none"> <li>Destiny Laboratory provides initial U.S. user capability.</li> <li>Destiny is launched with 5 system racks already installed inside of the module.</li> <li>Control Moment Gyroscopes are activated with delivery of electronics in lab, providing electrically powered attitude control.</li> </ul>
Jun 2000	5A.1	US Space Shuttle (STS-102) <i>Discovery</i> Crew Exchange: Ex-2 up Ex-1 down		<ul style="list-style-type: none"> <li>Destiny Laboratory Outfitting</li> <li>Leonardo Multi-Purpose Logistics Module (MPLM) carries equipment racks</li> </ul>	<ul style="list-style-type: none"> <li>Launches second resident crew (designated Expedition 2 crew) to the station: Commander Yuri Usachev, James S. Voss and Susan Helms; Returns first crew to Earth: Shepherd, Gidzenko and Krikalev.</li> <li>Provides logistics and resupply.</li> <li>Carries equipment racks to outfit the U.S. Destiny Laboratory Module in first flight of the Italian-built Leonardo logistics module.</li> </ul>
July 2000	6A	US Space Shuttle (STS-100) <i>Endeavour</i>		<ul style="list-style-type: none"> <li>Raffaello MPLM (Lab outfitting)</li> <li>Ultra High Frequency (UHF) antenna</li> <li>Space Station Remote Manipulator System</li> </ul>	<ul style="list-style-type: none"> <li>First flight of Italian-built Raffaello Multi-Purpose Logistics Module (MPLM) carries 6 system racks and 2 storage racks for U.S. Lab.</li> <li>UHF antenna provides space-to-space communications capability for US-based spacewalks.</li> <li>Delivers Canadian SSRMS (station mechanical arm) needed to perform assembly operations on later flights.</li> </ul>
Aug 2000	7A	US Space Shuttle (STS-104) <i>Atlantis</i>		<ul style="list-style-type: none"> <li>Joint Airlock</li> <li>High Pressure Gas Assembly</li> </ul>	<ul style="list-style-type: none"> <li>Airlock provides station-based Extravehicular Activity (EVA) spacewalking capability for both US and Russian spacesuits.</li> <li>High pressure gas assembly supports spacewalk operations and augments the Zvezda Service Module gas resupply system.</li> </ul>

Date	Flight	Launch Vehicle	Configuration	Element(s)	Rationale
Sept 2000	4R	Russian Soyuz Rocket		<ul style="list-style-type: none"> <li>Docking Compartment-1 (DC-1)</li> </ul>	<ul style="list-style-type: none"> <li>Provides additional egress, ingress location for Russian-based spacewalks and a Soyuz docking port.</li> </ul>
Nov 2000	7A.1	US Space Shuttle (STS-105) <i>Endeavour</i> Crew Exchange: Ex-3 up Ex-2 down		<ul style="list-style-type: none"> <li>Multi-Purpose Logistics Module</li> </ul>	<ul style="list-style-type: none"> <li>Launches third resident crew to station: Commander Kenneth D. Bowersox, Vladimir Dezhurov and Mikhail Turin; Returns second crew to Earth: Usachev, Voss and Helms.</li> <li>U.S. stowage racks and International Standard Payload Racks (ISPRs) carried in Italian-built Multi-Purpose Logistics Module.</li> <li>Second U.S.-built spacewalkers' crane is attached to exterior of the station.</li> </ul>
Jan 2001	UF-1	US Space Shuttle (STS-106) <i>Atlantis</i>		<ul style="list-style-type: none"> <li>MPLM</li> <li>PV Module batteries</li> </ul>	<ul style="list-style-type: none"> <li>Provides for research work by delivering experiment racks for US Laboratory and two storage racks.</li> </ul>
Mar 2001	8A	US Space Shuttle (STS-108) <i>Endeavour</i> Crew Exchange: Ex-4 up Ex-3 down		<ul style="list-style-type: none"> <li>Central truss segment (Integrated Truss Structure S0)</li> <li>Mobile Transporter (MT)</li> </ul>	<ul style="list-style-type: none"> <li>Launches fourth resident crew: Commander Yuri Onufrienko, Carl E. Walz and Daniel Bursch; Returns Bowersox, Dezhurov and Turin.</li> <li>ITS S0, the center segment of the 300-foot station truss, attaches to the U.S. Lab. Four more segments will attach to each side of the S0 truss.</li> <li>Canadian Mobile Transporter is a movable base for the arm to allow it to travel the station truss after delivery of the Mobile Base System (MBS).</li> </ul>
May 2001	UF-2	US Space Shuttle (STS-109) <i>Atlantis</i>		<ul style="list-style-type: none"> <li>Multi-Purpose Logistics Module with payload racks</li> <li>Mobile Base System (MBS)</li> </ul>	<ul style="list-style-type: none"> <li>The Multi-Purpose Logistics Module (MPLM) carries experiment racks and three stowage and resupply racks to the station.</li> <li>The Mobile Base System is installed on the Mobile Transporter to complete the Canadian Mobile Servicing System (MSS). The mechanical arm will now have the capability to "inchworm" from the U.S. lab fixture to the MSS and travel along the truss to work sites.</li> </ul>
July 2001	9A	US Space Shuttle (STS-111) <i>Endeavour</i>		<ul style="list-style-type: none"> <li>First starboard truss segment (ITS S1) with radiators</li> <li>Crew and Equipment Translation Aid (CETA) Cart A (first of two)</li> </ul>	<ul style="list-style-type: none"> <li>Delivers first starboard, or right side, truss segment (S1 truss) to be attached to central truss segment (S0 truss). Additional cooling radiators are delivered but will remain stowed until flight 12A.1.</li> <li>Backup S-band communications capability is provided.</li> <li>CETA cart can be used by spacewalkers to move along truss with equipment.</li> </ul>

Date	Flight	Launch Vehicle	Configuration	Element(s)	Rationale
Aug 2001	11A	US Space Shuttle (STS-112) <i>Atlantis</i>		<ul style="list-style-type: none"> <li>First port truss segment (ITS P1)</li> <li>Crew and Equipment Translation Aid (CETA) Cart B (second of two)</li> </ul>	<ul style="list-style-type: none"> <li>Delivers the first port, or left side, truss segment (P1 truss) to be attached to central truss segment (S0 truss). Also includes additional cooling radiators that will remain stowed until flight 12A.1.</li> <li>The Crew and Equipment Translation Aid Cart can be used by spacewalkers to move along the truss with equipment.</li> </ul>
Nov 2001	9A.1	US Space Shuttle (STS-114) <i>Discovery</i>		<ul style="list-style-type: none"> <li>Russian-provided Science Power Platform (SPP) with four solar arrays</li> </ul>	<ul style="list-style-type: none"> <li>Delivery of the Russian power and control mast with four solar arrays, called the Science Power Platform, will provide additional Russian electrical power.</li> <li>Delivers European Robotic Arm (ERA), a second station mechanical arm that will be used to maintain the SPP.</li> </ul>
Jan 2002	12A	US Space Shuttle (STS-115) <i>Atlantis</i>		<ul style="list-style-type: none"> <li>Second port truss segment (ITS P3/P4)</li> <li>Solar array and batteries</li> </ul>	<ul style="list-style-type: none"> <li>Delivers second port, or left side, truss segment (P3/P4 truss) to attach to first port truss segment (P1 truss).</li> <li>Central cooling radiators, delivered earlier on flights 9A and 11A, are deployed from first starboard (S1 truss) port (P1) truss segments.</li> <li>Exterior attachments for Brazilian Unpressurized Logistics Carriers (ULCs) are delivered.</li> </ul>
Mar 2002	12A.1	US Space Shuttle (STS-117) <i>Discovery</i>		<ul style="list-style-type: none"> <li>Third port truss segment (ITS P5)</li> <li>Multi-Purpose Logistics Module</li> </ul>	<ul style="list-style-type: none"> <li>Delivers third port, or left side, truss segment (P5 truss) to attach to second port truss segment (P3/P4 truss).</li> </ul>
May 2002	13A	US Space Shuttle (STS-118) <i>Atlantis</i>		<ul style="list-style-type: none"> <li>Second starboard truss segment (ITS S3/S4)</li> <li>Solar array set and batteries (Photovoltaic Module)</li> </ul>	<ul style="list-style-type: none"> <li>The second starboard truss segment (S3/S4 truss) is attached along with a third set of solar arrays.</li> <li>Four external attachment sites for truss-mounted exterior experiments and research are delivered.</li> </ul>
June 2002	3R	Russian Proton Rocket		<ul style="list-style-type: none"> <li>Universal Docking Module</li> </ul>	<ul style="list-style-type: none"> <li>Provides docking locations for Russian Research Modules and a Docking Compartment (DC2) delivered on Flight 5R. The module also provides additional life support systems capabilities.</li> </ul>

Date	Flight	Launch Vehicle	Configuration	Element(s)	Rationale
July 2002	5R	Russian Soyuz Rocket		<ul style="list-style-type: none"> <li>• Docking Compartment 2 (DC2)</li> </ul>	<ul style="list-style-type: none"> <li>• Provides an improved Russian airlock.</li> </ul>
July 2002	10A	US Space Shuttle (STS-120) <i>Discovery</i>		<ul style="list-style-type: none"> <li>• Node 2</li> </ul>	<ul style="list-style-type: none"> <li>• The second of three station connecting modules, Node 2, attaches to end of U.S. Lab and provides attach locations for the Japanese laboratory, European laboratory, the Centrifuge Accommodation Module and later Multi-Purpose Logistics Modules. Unity was the first connecting module, or node, to be launched.</li> <li>• Primary docking location for the Shuttle will be a pressurized mating adapter attached to Node 2.</li> </ul>
Aug 2002	10A.1	US Space Shuttle (STS-121) <i>Atlantis</i>		<ul style="list-style-type: none"> <li>• U.S. Propulsion Module</li> </ul>	<ul style="list-style-type: none"> <li>• U.S. Propulsion Module provides additional capability for station refueling, attitude control and reboost independent of Russian segment capabilities.</li> </ul>
Oct 2002	1J/A	US Space Shuttle (STS-123) <i>Endeavour</i>		<ul style="list-style-type: none"> <li>• Japanese Experiment Module Experiment Logistics Module (JEM ELM PS)</li> <li>• Science Power Platform (SPP) solar arrays</li> </ul>	<ul style="list-style-type: none"> <li>• Japanese-developed pressurized logistics module is delivered carrying four systems racks, 1 stowage rack and 3 experiment racks to be used for the Kibo Japanese Laboratory to be delivered on flight 1J.</li> <li>• Two additional solar arrays for the Russian Science Power Platform (SPP) are delivered on the Brazilian Unpressurized Logistics Carrier (ULC) in the shuttle's payload bay.</li> </ul>
Jan 2003	1J	US Space Shuttle (STS-124) <i>Discovery</i>		<ul style="list-style-type: none"> <li>• Kibo Japanese Experiment Module (JEM)</li> <li>• Japanese Remote Manipulator System (JEM RMS)</li> </ul>	<ul style="list-style-type: none"> <li>• The primary Japanese contribution, the Kibo Japanese Experiment Module (JEM) laboratory, is delivered and begins use.</li> <li>• A Japanese robotic arm attached to the Japanese Experiment Module is delivered. The arm will be used to tend experiments on the laboratory's "back porch," an Exposed Facility (EF) to be delivered on flight 2 J/A.</li> </ul>
Feb 2003	UF-3	US Space Shuttle (STS-125) <i>Endeavour</i>		<ul style="list-style-type: none"> <li>• Multi-Purpose Logistics Module (MPLM)</li> <li>• Express Pallet</li> </ul>	<ul style="list-style-type: none"> <li>• Provides for experiment delivery, resupply and changeout.</li> <li>• Multi-Purpose Logistics Module carries inside experiment equipment racks.</li> <li>• Express Pallet carries external experiment equipment.</li> </ul>

Date	Flight	Launch Vehicle	Configuration	Element(s)	Rationale
May 2003	UF-4	US Space Shuttle (STS-127) <i>Discovery</i>		<ul style="list-style-type: none"> <li>Express Pallet</li> <li>Spacelab Pallet carrying "Canada Hand" (Special Purpose Dexterous Manipulator)</li> <li>Alpha Magnetic Spectrometer</li> </ul>	<ul style="list-style-type: none"> <li>Canadian-developed "hand" for station mechanical arm provides more intricate robotic maintenance capability.</li> <li>Provides for experiment resupply and changeout</li> <li>Express Pallet carries external experiment equipment.</li> <li>Delivers Alpha Magnetic Spectrometer experiment to be attached to station truss site.</li> </ul>
June 2003	2J/A	US Space Shuttle (STS-128) <i>Endeavour</i>		<ul style="list-style-type: none"> <li>Japanese Experiment Module Exposed Facility (JEM EF)</li> <li>Solar Array Batteries</li> </ul>	<ul style="list-style-type: none"> <li>Delivers "back porch" (Exposed Facility) for Japanese laboratory (JEM) along with external experiments carried in a Japanese exterior logistics carrier.</li> <li>Four additional battery sets are delivered to complete the complement of batteries for all U.S. solar array sets delivered thus far.</li> </ul>
July 2003	9R	Russian Proton Rocket		<ul style="list-style-type: none"> <li>Docking and Stowage Module (DSM)</li> </ul>	<ul style="list-style-type: none"> <li>Mounted to the Zarya module's nadir port.</li> <li>Provides additional on-orbit stowage and Soyuz docking location.</li> <li>Similar in size and shape to the Zarya module.</li> </ul>
Aug 2003	14A	US Space Shuttle (STS-130) <i>Discovery</i>		<ul style="list-style-type: none"> <li>Cupola</li> <li>Science Power Platform (SPP) Solar Arrays</li> <li>Service Module Micrometeoroid and Orbital Debris Shields (SMMOD)</li> </ul>	<ul style="list-style-type: none"> <li>Cupola with eight windows provides station crew with direct viewing capability for some robotics operations, spacewalks and experiments.</li> <li>Two additional Russian Science Power Platform (SPP) Solar Arrays complete the arrays on the SPP. SPP arrays and exterior debris shielding for Service Module (SMMOD) are carried on Brazilian-provided Unpressurized Logistics Carrier (ULC).</li> </ul>
Sep 2003	UF-5	US Space Shuttle (STS-131) <i>Endeavour</i>		<ul style="list-style-type: none"> <li>Multi-Purpose Logistics Module</li> <li>Express Pallet</li> </ul>	<ul style="list-style-type: none"> <li>Provides for experiment delivery, resupply and changeout.</li> <li>Multi-Purpose Logistics Module carries inside experiment equipment racks.</li> <li>Express Pallet carries external experiment equipment.</li> </ul>
Jan 2004	20A	US Space Shuttle (STS-133) <i>Atlantis</i>		<ul style="list-style-type: none"> <li>Node 3</li> </ul>	<ul style="list-style-type: none"> <li>Delivers third node as connecting module for station (Node 3) to be attached underneath Unity node (Node 1).</li> <li>Inside of Node 3 are 2 avionics racks and 2 life support system racks.</li> <li>Node 3 provides attachment points for the U.S. Habitation Module, U.S. Crew Return Vehicle, pressurized mating adapter, and any future station additions.</li> </ul>

Date	Flight	Launch Vehicle	Configuration	Element(s)	Rationale
Feb 2004	1E	US Space Shuttle (STS-134) <i>Discovery</i>		<ul style="list-style-type: none"> <li>European Laboratory - Columbus Orbital Facility</li> </ul>	<ul style="list-style-type: none"> <li>Delivers the European Space Agency's primary contribution to the station, the Columbus Orbital Facility laboratory, provides additional research capability.</li> </ul>
Mar 2004	8R	Russian Soyuz Rocket		<ul style="list-style-type: none"> <li>Research Module 1</li> </ul>	<ul style="list-style-type: none"> <li>Delivers first of two Russian laboratories providing experiment and research facilities.</li> </ul>
Mar 2004	17A	US Space Shuttle (STS-135) <i>Endeavour</i>		<ul style="list-style-type: none"> <li>Multi-Purpose Logistics Module</li> <li>Node 3, U.S. Lab racks</li> </ul>	<ul style="list-style-type: none"> <li>Delivers racks for Node 3 that allow expansion of station crew from three members to up to six members.</li> <li>Outfits Node 3 with racks carried in MPLM: 2 life support system racks; 2 flight crew equipment racks (waste collection system and galley) and 3 Crew Health Care System racks.</li> <li>For U.S. Lab, delivers 1 systems rack, 1 stowage rack and experiment racks.</li> </ul>
May 2004	18A	US Space Shuttle (STS-136) <i>Atlantis</i>		<ul style="list-style-type: none"> <li>U.S. Crew Return Vehicle (CRV)</li> </ul>	<ul style="list-style-type: none"> <li>Crew Return Vehicle attached to the station provides additional 7-person crew return capability added to already existing 3-person Soyuz crew return capability</li> </ul>
June 2004	19A	US Space Shuttle (STS-137) <i>Discovery</i>		<ul style="list-style-type: none"> <li>Multi-Purpose Logistics Module</li> </ul>	<ul style="list-style-type: none"> <li>Delivers 4 crew quarters racks to be placed in Node 2 and provide for transition to 6-person crew</li> <li>Delivers 6 U.S. stowage racks</li> <li>Delivers third starboard truss segment (S5 truss)</li> </ul>
July 2004	15A	US Space Shuttle (STS-138) <i>Endeavour</i>		<ul style="list-style-type: none"> <li>Solar Arrays and Batteries (Photovoltaic Module S6)</li> </ul>	<ul style="list-style-type: none"> <li>Fourth and final set of U.S. solar arrays delivered along with fourth starboard truss segment (S6).</li> </ul>

Date	Flight	Launch Vehicle	Configuration	Element(s)	Rationale
Aug 2004	10R	Russian Soyuz Rocket		<ul style="list-style-type: none"> <li>Research Module 2</li> </ul>	<ul style="list-style-type: none"> <li>Delivers a second Russian laboratory to house experiments and research facilities.</li> </ul>
Aug 2004	UF7	US Space Shuttle (STS-139) Atlantis		<ul style="list-style-type: none"> <li>Centrifuge Accommodations Module (CAM)</li> </ul>	<ul style="list-style-type: none"> <li>The Centrifuge Accommodations Module (CAM) completes the complement of station laboratory facilities providing a facility to control gravity for research activities. The CAM attaches to Node 2.</li> </ul>
Sept 2004	UF-6	US Space Shuttle (STS-140) Discovery		<ul style="list-style-type: none"> <li>Multi-Purpose Logistics Module</li> <li>Batteries</li> </ul>	<ul style="list-style-type: none"> <li>Provides for experiment delivery, resupply and changeout.</li> <li>Delivers two solar array batteries to complete station battery outfitting.</li> </ul>
Nov 2004	16A	US Space Shuttle (STS-141) Endeavour		<ul style="list-style-type: none"> <li>U.S. Habitation Module</li> </ul>	<ul style="list-style-type: none"> <li>Delivers U.S. Habitation Module to enhance crew accommodations and provide for a station crew with as many as seven members.</li> </ul>

**NOTES:**

- Additional Progress, Soyuz, possible H-II Transfer Vehicle and Automated Transfer Vehicle flights for cargo and crew transport are not shown.***
- Total assembly flights: 37 Space Shuttle flights (2 completed); 9 Russian launches (1 completed).***
